

Energy Sources – 1 Year

Diesel generator produces electricity and heat

34% electricity
66% waste heat

Energy cost

Total: \$2,790,000
Cost per person: \$8,300

54% gasoline **9%** heating oil
7% diesel for vehicles **2%** propane
25% hydro **1%** firewood
1% diesel generator

Renewable energy

18% of total energy
14% of total from hydro
4% of total from firewood

Unless otherwise noted, numbers reflect energy sources purchased or sourced in the community, and do not include industry or commercial transport. Percentages may not add to 100% due to rounding.

ENERGY PROFILE

Where we get energy and how we use it

KATL'ODEECHE 2018

Population: 335

Greenhouse Gas (GHG) Emissions – 1 Year

Community total GHG emissions per year

4,000 tonnes
12 tonnes/person

Average tonnes of GHGs per person per year

* Includes emissions from industry and commercial transport.

Energy Use – 1 Year

Energy use in homes

14% of total energy use
43% of total electricity
40% of total heating oil
78% of total propane
100% of total firewood

Energy use in other buildings

Store, school, church, office, arena, library, etc.

15% of total energy use
57% of total electricity
60% of total heating oil
22% of total propane

Transport (local – no air transport)

Cars, trucks, boats, ATVs, skidoos, etc.

66% of total energy use
Fuel purchased in the community.

Waste energy

From electricity production and heating

5% of total energy use

ENERGY PROFILE

KATL'ODEECHE 2018

EXTRA INFO

What's a megajoule (MJ)?

A joule is a unit of energy. A megajoule is 1 million joules.

Some examples:

- 1 BBQ propane tank = 500 MJ
- 1 kWh = 3.6 MJ
- 1 L of heating oil = 38.4 MJ
- 1 L of propane = 26.6 MJ
- 1 tonne of wood pellets = 19,200 MJ
- 1 cord of wood = 18,700 MJ

What's waste energy?

When fuels are burned, some of their energy is released as heat that can't be used. The amount of energy that an appliance or device can use is called its efficiency. For example:

Diesel generators can usually only convert 25–35% of the diesel's energy to electricity, while 65–75% is released as heat.

Furnaces, boilers, wood stoves and other heating appliances can use anywhere from 70% to more than 95% of the heat they produce. The rest is released up the chimney.

Energy sources

Gasoline

- 57% of total energy
- Cost: \$1,510,000
- Amount: 1,150,000 Litres
- GHGs: 2,830 tonnes
- Energy: 38,700,000 MJ

Hydro

- 14% of total energy
- Cost: \$710,000
- Amount: 2,590,000 kWh
- GHGs: 0 tonnes
- Energy: 9,320,000 MJ

Heating oil

- 13% of total energy
- Cost: \$252,000
- Amount: 225,000 Litres
- GHGs: 605 tonnes
- Energy: 8,630,000 MJ

Diesel for vehicles

- 9% of total energy
- Cost: \$209,000
- Amount: 164,000 Litres
- GHGs: 442 tonnes
- Energy: 6,310,000 MJ

Firewood

- 4% of total energy
- Cost: \$35,000
- Amount: 127 Cords
- GHGs: 0 tonnes
- Energy: 2,380,000 MJ

Propane

- 2% of total energy
- Cost: \$44,000
- Amount: 59,000 Litres
- GHGs: 91 tonnes
- Energy: 1,580,000 MJ

Diesel generator

- 1% of total energy
- Cost: \$23,000
- Amount: 23,000 Litres
- GHGs: 63 tonnes
- Energy: 902,000 MJ

Community GHG emissions

- Homes: 10%
- Other buildings: 8%
- Transport: 81%
- Diesel generator: 2%

Total community energy use

- 67,800,000 MJ
- 200,000 MJ/person
